

## Health IT Quick-Stat #33

### Electronic Health Record Use among Physicians Participating in Delivery Reform Programs

*Percent of Physicians Reporting Accountable Care Organization, Patient-Centered Medical Home, or Pay-for-Performance Participation (by EHR Adoption Status)*

2013

As of 2013, 45% of physicians participate in any type of delivery reform program. More than 8 in 10 of physicians participating in delivery reform activities are using electronic health records.

	% of Total Population Participating in Program	% Using EHR that Meets MU Criteria	% Using Other EHR	% Not Currently Using EHR
Accountable Care Organization	23%	76%	8%	16%
Patient-Centered Medical Home	12%	81%	7%	12%
Pay-for-Performance	32%	77%	7%	16%
Not Participating in a Delivery Reform Program	55%	43%	16%	41%

**Summary:**

At least three-quarters of all delivery reform participants reported using EHRs that met Meaningful Use criteria. Physicians who were participating in PCMH programs had the highest rate of EHR use, and the highest rate of use of EHRs that met Meaningful Use criteria.

**Source:**

2013 National Ambulatory Medical Care Physician Workflow Survey.

**Notes:**

[1] Determination of whether the EHR system met Meaningful Use criteria was self-reported by the physicians, with an affirmative response to the question, "Does your current system meet meaningful use criteria defined by HHS?"

[2] Participation in the delivery reform activities was ascertained through physician self-reporting to the following questions:

*(i) Does the reporting location participate in an Accountable Care Organization or similar arrangement?*

*(ii) Does the reporting location participate in a certified PCMH arrangement?*

*(iii) Does the reporting location participate in a Pay-for-Performance arrangement?*

[3] Accountable Care Organization (ACO): office-based providers, hospitals, and suppliers voluntarily organize into an ACO to coordinate patient care. The goal of coordinated care is to ensure that patients, especially the chronically ill, get the right care at the right time, while avoiding unnecessary duplication of services and preventing medical errors.

[4] Patient-Centered Medical Home (PCMH): a team-based care delivery model which coordinates care across multiple specialties through a patient's primary care physician to improve and maximize health outcomes.

[5] Pay for Performance: also known as value-based purchasing, hospitals, physicians, and other health care providers carry out health care quality and efficiency improvements for patients in exchange for financial incentives from health care payers.
